The purpose of the ESW summer fellowship is to further the work of the individual ESW projects which includes NUFuel, focused on biodiesel; Pura Playa, working to remove microplastics from beaches and reduce disposable water bottle use on campus; NUSOS, a summit on sustainability that hosts educational events throughout the year; Hydroponics, working to create accessible on-campus hydroponics systems; and Chagres Rice, designing a rice huller for a village in Panama with plans to visit in the spring. Each fellow will work on their individual projects for the four week term, as well as participate in a group project of repairing and improving the bike-powered blender for use at future events. In addition, the fellowship will host educational outings, social events, and speakers from Northwestern and the Chicago area.
